APPENDIX A

Memorandum of Understanding

November 30, 2023

REVISED January 1, 2024

REVISED January 17, 2024

R.J. "Jeron" Monroe
NCDOT Division 8
District One Engineer
300 DOT Drive
Pittsboro, NC 27312

Subject: Memorandum of Understanding for a proposed Quarry near Goldston, N.C. in Chatham County.

Dear Jeron,

As you are aware, Summit Design and Engineering has been retained by a developer to perform a traffic engineering analysis and study for a site on the east side of Bonlee-Carbonton Road (SR 1009) and north of J. Cook Road (SR 2310) near Vander-Oldham Road (SR 2312) in Chatham County. Summit will submit a Traffic Impact Analysis for your review, based upon the parameters discussed in our scoping conference. This is a memorandum of understanding to confirm the scope of the study area and procedures that will be used to complete the TIA.

Study Area/Scope & Scenarios

After discussions with you and your staff during the scoping conference, it was agreed that the Traffic Analysis will include the following intersections for analysis, with an additional intersection (Main & Church) added due to the proposed RCUT at NC 902 & US 421 (** indicates new data to be collected):

- NC 902 & US 421 **
- NC 902 & Old US 421 (SR 1176) **
- NC 902 & Bonlee-Carbonton Rd. (SR 1009)/Bonlee School Rd. (SR 1139) **
- Bonlee-Carbonton Rd. (SR 1009) & Site Drive
- N. Main St. & Chatham Ave. **
- N. Main St. (SR 2333) & Pittsboro-Goldston Rd. (SR 1010)
- N. Main St. (SR 2333) & Church St./Lancaster Dr.

In addition to these intersections, the following roadways will be evaluated for non-intersection capacity availability as required in the Goldston Unified Development Ordinance (UDO). These roadways will be evaluated using the Highway Capacity Manual procedures, and will use ADT information for the capacity analysis:

- Bonlee-Carbonton Rd. (SR 1009) between NC 902 and J. Cook Rd. (SR 2310)
- Bear Creek Church Rd. (SR 2306) between Bonlee-Carbonton Rd. (SR 1009) and Chatham Ave.
- Goldston-Glendon Rd. (SR 2303) between J. Cook Rd. (SR 2310) and Church St. (SR 2306)

The site is proposed to be constructed in one phase within a single year, with two buildings proposed, an office/scale house and a maintenance facility that would employ 20 to 25 employees on site daily. The quarry itself involves no construction, as it is solely for the purpose of excavating materials and having them hauled/delivered elsewhere. It will

be constructed with one new street connection to SR 1009 (Bonlee-Carbonton Road). Based on the short period of time to construct the quarry features and structures it was determined that a single build phase analysis would be needed in addition to analyzing the existing No Build conditions. NCDOT project W-5808B that will convert the traffic signal at US 421-NC 902 is scheduled to let in February 2025, and it is planned that the quarry will open in late 2025.

Therefore the analysis horizons to be included are:

- 2023 Existing Conditions
 - ~~2024 2025~~ Buildout/No Build Conditions

Based on the timing of the development submittal schedule, turn movement count data will be collected during the month of December, before traditional schools have let out for the holidays. Although there is a high school within the study area, the turn movement counts are planned to be collected in typical 15-minute intervals, as the trips generated by the quarry are anticipated to be uniform throughout the day, and not have as defined a “peak” as other land use types. Based on a review of the historical AADT and discussions with NCDOT, an annual growth rate of 1.5 % will be applied to base year (2023) traffic volumes to determine the future years’ No-Build traffic volumes.

NCDOT staff did not identify any other additional developments nearby or within the study area that would need to be considered for this analysis. However, DOT staff is aware of a safety project scheduled to be let in March 2024 that will involve the transformation of the existing signalized study intersection at NC 902 & US 421 to an R-cut intersection with turn-around bulbs for the NC 902 approaches. As such, the turn movement count for this intersection will be collected for use in signal warrant analysis to determine potential need to signalize one of the U-turn intersections.

Trip Generation

Based upon the information provided by the developer of the quarry, trip generation analysis will be performed using data provided for quarries of similar size, maturity and expected traffic and growth. As noted above, the non-employee trips generated by the hauling of materials out of the quarry will be integrated with the background traffic peak hour trips to analyze the impacts to the peak hours of the roadways and intersections.

The weekday average daily trips generated, as well as AM and PM Peak Hour trips is shown below:

TRIP GENERATION SUMMARY – rev 1/1/24

| Phase | ITE Code | Land Use | Size | Units | Wkday Avg # Trips | | | Adjacent Street Traffic Volumes | | |
|-------|----------|----------------|------|----------------------------------|-------------------|------|-------|--|------------|--------------------|
| | | | | | Enter | Exit | Total | Weekday | AM Peak Hr | Weekday PM Peak Hr |
| 2024 | 712 | SMALL OFFICE * | 25 | EMPLOYEES | 98 | 99 | 197 | Enter | Exit | Total |
| 2024 | n/a | Quarry ** | n/a | trips | 570 | 570 | 1140 | 58 | 58 | 116 |
| | | | | Unadjusted Volume | 668 | 669 | 1337 | 80 | 62 | 142 |
| | | | | Internal Capture | | | | 0 | 0 | 0 |
| | | | | Pass-By Trips | | | | 0 | 0 | 0 |
| | | | | Volume Added to Adjacent Streets | 668 | 669 | 1337 | 80 | 62 | 142 |
| | | | | | | | | Source: * ITE Trip Generation Manual, 10th Edition | | |
| | | | | | | | | ** Carolina Sunrock Quarry records | | |

Note that the quarry trips calculated were based on records provided by a local quarry operator. Records were provided for years 2018 thru 2022, and noting that each year successively saw an increase in growth, an additional year's growth (6.5%) was estimated for 2023, and used for the hourly truck trips rates above. It was also assumed that the truck traffic in and out of the quarry was relatively equal for all hourly periods. See attached info for quarry trips.

Trip Distribution

The site-generated trips to and from the proposed site are based on existing traffic patterns, information on location of customers provided by the owner/operator of the quarry and engineering judgement. The quarry operator anticipates that the majority of the truck traffic in and out of the site will be making pickups from the quarry for construction activities to the north of Goldston, closer to Siler City. Some traffic may develop for sites to the south near Sanford, but very little is anticipated from this direction. Due to current routing options available on apps such as Google Maps and Waze, it is likely that some non-local drivers will use the adjacent east-west routes to access US 421 via the interchange at Pittsboro-Goldston Road by routing thru Goldston, especially after the NC 902 intersection is converted to RCUT intersection. Some southbound traffic is expected to follow current local truck patterns into Goldston and turn onto S. Main Street and head to US 421 south of Goldston. The distribution percentages for the retail/service land use types are estimated as follows:

- 65% to/from the north on US 421 via NC 902
- 25% to/from the north on US 421 via Pittsboro-Goldston Rd.
- 10 % to/from the south using S. Main St. and on to US 421

Access to the site is proposed to be provided by one (1) new street connection on Bonlee-Carbonton Road (SR 1009). It is anticipated that the new entrance will be full-access with a single right-left turn lane exiting the site drive, and single lane entering the site. The site will utilize stop control for the proposed driveway.

Trip Assignment

To obtain total traffic volumes, the site traffic volumes will be added to the existing traffic volumes plus background traffic growth, to the project build year in 2024. Summit Design & Engineering will perform detailed traffic engineering capacity analysis for the subject intersections, as well as capacity analysis for the roadway segments identified above using the ADT data collected.

General recommendations (turn lanes, realignment, intersection reconfiguration, operational or signage additions) for needed roadway and intersection improvements will be developed for the existing roadway network affected by the proposed project. Additionally, if there are any future improvements identified for the development to be recommended, a threshold level of build will be determined to identify the timing of needed improvements.

NCDOT Congestion Management Guidelines will be followed during the development of the analysis, and any signal warrant analysis, if necessary, will be provided where needed. NCDOT design standards will be followed in designing the site accesses and/or improvements as well. A signal warrant analysis will be provided for the future scenario of the NC 902 intersection from a typical signal with 4 approaches to an RCUT intersection with U-turns, and the site generated traffic integrated into the new traffic pattern.

Traffic Impact Analysis Report

Summit will prepare a summary report for NCDOT and Chatham County staff for review. No hard copies of the final report will be prepared, only electronic PDF copies will be supplied for distribution. Electronic configuration files of the Synchro analysis will be available upon request as well.

If you have any questions or comments regarding the proposed scope of work or estimate, please call me at (919) 732-3883 x3139, or my mobile number at 919-656-3439.

Very truly yours,

Edward W. Sircany, PE
Traffic & Technology Engineer

Note: Quarry shut down December of 2016 and facility was rebuilt in 2017 reopening 3rd Q of 2017.

Small Office Building (712)

Vehicle Trip Ends vs: Employees
On a: Weekday

Setting/Location: General Urban/Suburban

Number of Studies: 17

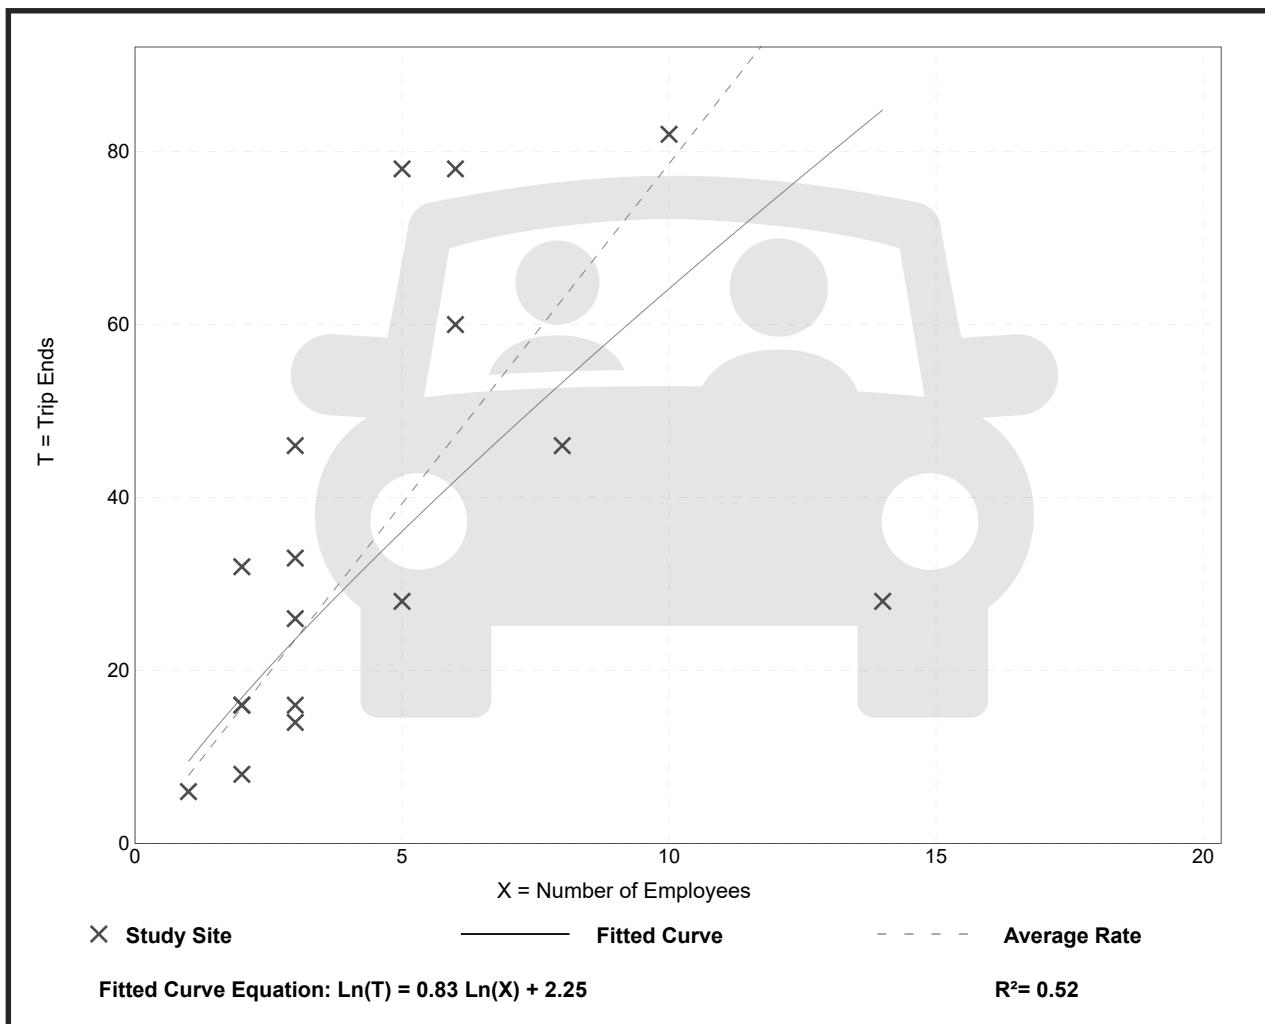

Avg. Num. of Employees: 5

Directional Distribution: 50% entering, 50% exiting

Vehicle Trip Generation per Employee

| Average Rate | Range of Rates | Standard Deviation |
|--------------|----------------|--------------------|
| 7.86 | 2.00 - 16.00 | 4.43 |

Data Plot and Equation

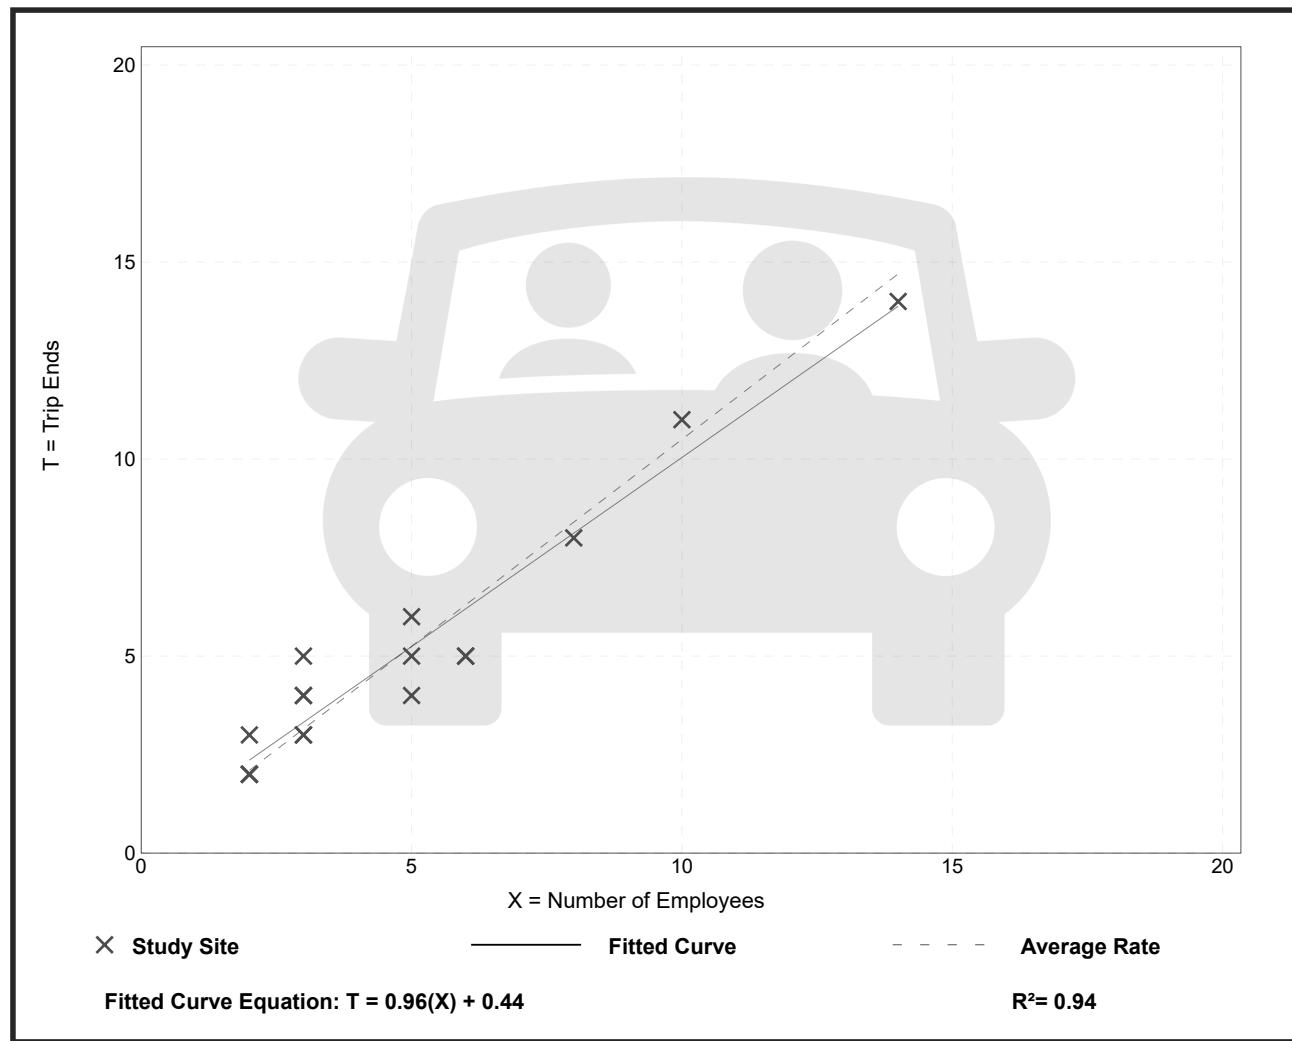

Small Office Building (712)

Vehicle Trip Ends vs: Employees
On a: Weekday,
Peak Hour of Adjacent Street Traffic,
One Hour Between 7 and 9 a.m.
Setting/Location: General Urban/Suburban
Number of Studies: 17
Avg. Num. of Employees: 5
Directional Distribution: 85% entering, 15% exiting

Vehicle Trip Generation per Employee

| Average Rate | Range of Rates | Standard Deviation |
|--------------|----------------|--------------------|
| 1.05 | 0.80 - 1.67 | 0.20 |

Data Plot and Equation

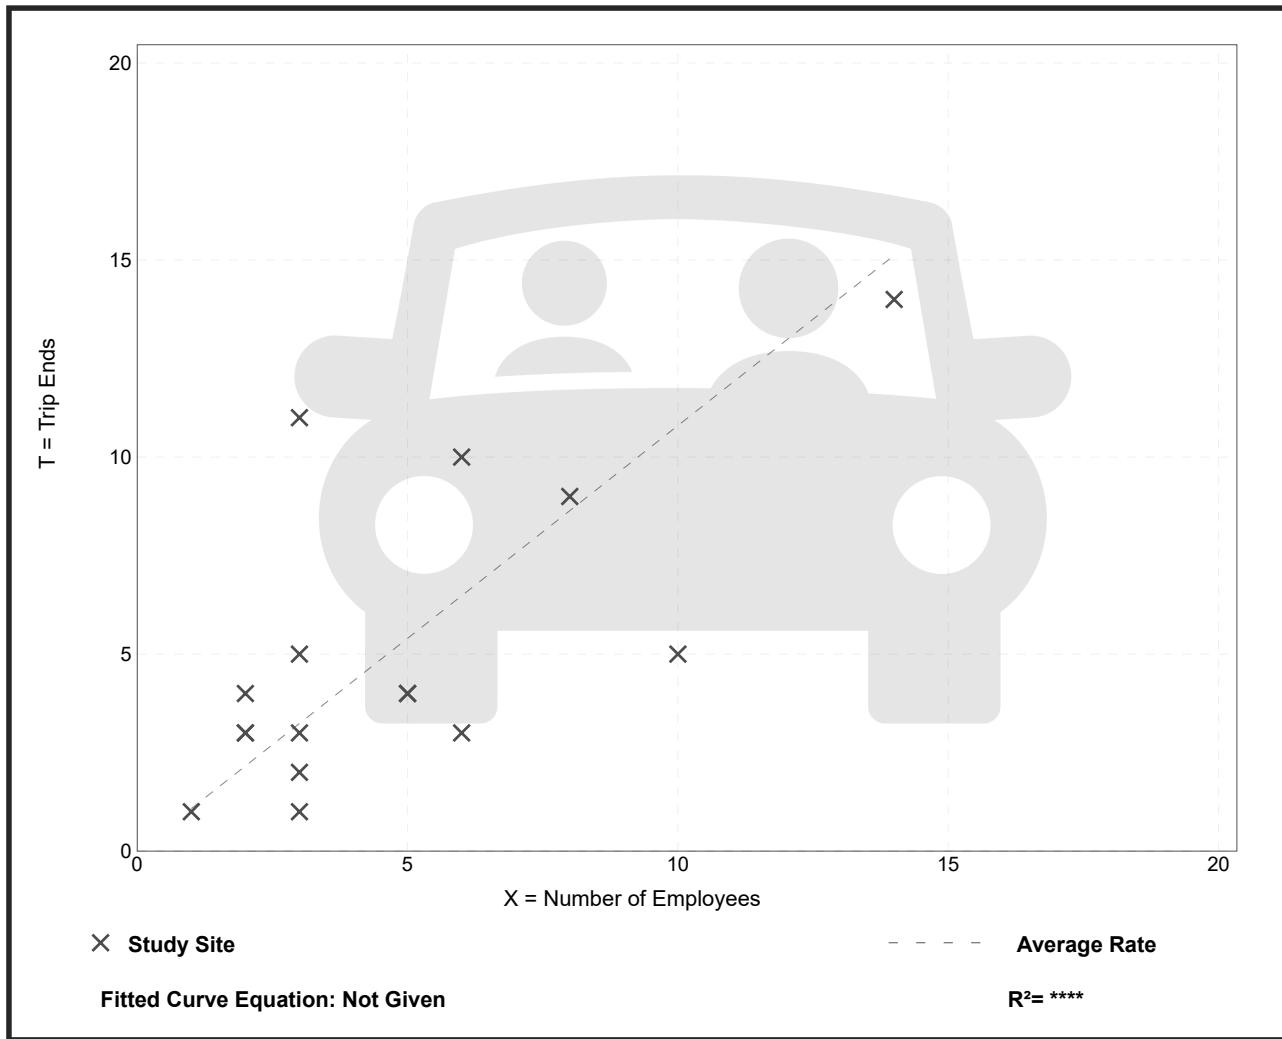

Small Office Building (712)

Vehicle Trip Ends vs: Employees
On a: Weekday,
Peak Hour of Adjacent Street Traffic,
One Hour Between 4 and 6 p.m.
Setting/Location: General Urban/Suburban
Number of Studies: 16
Avg. Num. of Employees: 5
Directional Distribution: 33% entering, 67% exiting

Vehicle Trip Generation per Employee

| Average Rate | Range of Rates | Standard Deviation |
|--------------|----------------|--------------------|
| 1.08 | 0.33 - 3.67 | 0.69 |

Warrants

Warrant 1: Eight-Hour Vehicular Volume

- A. Minimum Vehicular Volumes (Both major approaches --and-- higher minor approach) --or--
- B. Interruption of Continuous Traffic (Both major approaches --and-- higher minor approach) --or--
- 56% Vehicular --and-- Interruption Volumes (Both major approaches --and-- higher minor approach)

Warrant 2: Four-Hour Vehicular Volume

- Four-Hour Vehicular Volume (Both major approaches --and-- higher minor approach)

Warrant 3: Peak Hour

- A. Peak-Hour Conditions (Minor delay -- and-- minor volume --and-- total volume) --or--
- B. Peak-Hour Vehicular Volumes (Both major approaches --and-- higher minor approach)

Warrant 4: Pedestrian Volume

- A. Four Hour Volumes --or--
- B. One-Hour Volumes

Warrant 5: School Crossing

- Gaps Same Period --and--
- Student Volumes
- Nearest Traffic Control Signal (optional)

Warrant 6: Coordinated Signal System

- Degree of Platooning (Predominant direction or both directions)

Warrant 7: Crash Experience

- A. Adequate trials of alternatives, observance and enforcement failed --and--
- B. Reported crashes susceptible to correction by signal (12-month period) --and--
- C. 56% Volumes for Warrants 1A, 1B, --or-- 4 are satisfied

Warrant 8: Roadway Network

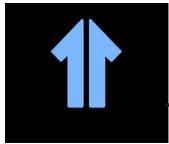

- A. Weekday Volume (Peak hour total --and-- projected warrants 1, 2, or 3) --or--
- B. Weekend Volume (Five hours total)

Warrant 9: Grade Crossing

- A. Grade Crossing within 140 ft --and--
- B. Peak-Hour Vehicular Volumes

2 Phase
Fully Actuated
(Isolated)

NOTES

- Refer to "Roadway Standard Drawings NCDOT" dated January 2012 and "Standard Specifications for Roads and Structures" dated January 2012.
- Do not program signal for late night flashing operation unless otherwise directed by the Engineer.
- Set all detector units to presence mode.
- In the event of loop replacement, refer to the current ITS and Signals Design Manual and submit a Plan of Record to the Signal Design Section.
- Pavement markings are existing.
- This intersection features a radar detection system. Shown locations of radar detectors are conceptual only. Detectors should be placed to ensure the desired operation parameters are achieved.
- Program phase 2 and phase 6 to use the radar detection system.

| OASIS 2070 TIMING CHART | | | | |
|-------------------------|------------|-----|------------|-----|
| FEATURE | PHASE | | | |
| | 2 | 4 | 6 | 8 |
| Min Green 1 * | 14 | 7 | 14 | 7 |
| Extension 1 * | 2.0 | 2.0 | 2.0 | 2.0 |
| Max Green 1 * | 120 | 20 | 120 | 20 |
| Yellow Clearance | 5.8 | 5.0 | 5.8 | 5.0 |
| Red Clearance | 1.5 | 1.6 | 1.5 | 1.6 |
| Red Revert | 2.0 | 2.0 | 2.0 | 2.0 |
| Walk 1 * | - | - | - | - |
| Don't Walk 1 | - | - | - | - |
| Seconds Per Actuation * | 1.5 | - | 1.5 | - |
| Max Variable Initial * | 46 | - | 46 | - |
| Time Before Reduction * | 15 | - | 15 | - |
| Time To Reduce * | 45 | - | 45 | - |
| Minimum Gap | 3.5 | - | 3.5 | - |
| Recall Mode | MIN RECALL | - | MIN RECALL | - |
| Vehicle Call Memory | YELLOW | - | YELLOW | - |
| Dual Entry | - | ON | - | ON |
| Simultaneous Gap | ON | ON | ON | ON |

* These values may be field adjusted. Do not adjust Min Green and Extension times for phases 2 and 6 lower than what is shown. Min Green for all other phases should not be lower than 4 seconds.

| Radar Detection System | | |
